Adrian Orłów

Front-end Developer

Warsaw, Poland
M: adrian@orlow.me
P: +48 792 138 222

Mindset: Software is a tool, not a goal

Key successes

- I built a product with minimal budget used by +1M unique users yearly.
- I've led a successful reimplementation of a product with +10 yrs tech debt.
- I designed a standarized tech recuritment process, which has been used in dozen of interviews and internal assesments.
- I've been a speaker at many tech and non-tech conferences, incl. Economic Forum Karpacz (+6K guests).
- I held successful business talks, which led to collaborations with major partners such as Onet, Demagog and IBRiS.
- I founded an NGO focuced on empowering society with technology, which have reached +7M and engaged +100 people in the last 2 years.

Experience and effects

JUNE 2022 – PRESENT

Appunite | Senior Front-end Team Leader

Administrative panel for payroll management

- Worked on architectural decisions and guidelines in the context of product implementation.
- Prepared analysis and strategy for the approach to its implementation. Given the very tight deadline, I actively worked with the team and managers to make the best decisions from a time and value perspective.
- Solved domain-specific problems that required some tough decisions to get around.
- Actively moved between business and technical contexts to effectively achieve the product's business goal.

React | Next.js | Zustand | Time management

Active help in HR and Sales processes

- Held dozen of interviews with front-end developers (mostly external, few internal).
- Responsible for gathering requirements, preparing the concept of the interview, leading the meeting and drawing conclusions.
- Prepared prospect analyses, estimations and collaborated in the preparation of offers. I actively participated in discussions with clients to determine their requirements and needs.

Recruitment | Business understanding

E-commerce of the biggest social media platform for anglers in the United States

- Responsible for application development, refactoring, managing tech debt and conducting expert calls with stakeholders
- I developed changes to automate business processes and increase sales. I efficiently managed the extensive technology debt taken during the creation of the MVP. With the help of small changes, I created a big impact, including automation and complex analytical research. I have also worked on major changes, including the implementation of a new shopping cart - from the mapping of user paths, to the in-depth analysis of possible solutions, to the final implementation.

React | Next.js | GraphQL | Jest | Cypress | Tailwind | React Testing Library

Web-based tool designed for exploring, analyzing, and organizing molecular networks

- I led a team of 3 people and delivered a complex web platform from scratch
- I was responsible for the concept of the state management architecture in the application, developer guidelines, as well as the implementation of key functionalities such as a system for presenting complex data on different maps.
- The product was based on a 10-year old application, so I carefully broke down and analysed each functionality. In addition, I conducted workshops with the client to ensure a consistent understanding of the product vision.
- I provided complex technical documentation of the application describing both its main functionalities and detailed use of minor ones.
- The project was highly complex on the state management side and required agile management of budget and short delivery schedule. I managed the salary and self-development expectations of team members.

Leadership | Project management | React | Next.js | Redux | REST | OpenLayers | Tailwind | Jest

</> Open Source Code

Project for streamlining communication with AI

- At the company we were aware that forced reading of large chunks of information can be counterproductive, so I've created a summarization tool which was able to shorten all documents in a simple and accessible way. It extracts the most relevant parts of the documents and then summarizes it into a few sentences, which are posted as a message on company's global chat.
- The AI-based summarization tool was a significant step in improving the company's communication strategies. The tool successfully allowed relevant and concise information to be more accessible to employees, increasing productivity and enabling them to easily remain informed about company decisions.

Python | AI | GPT-3 | LangChain | Process automation

</> Open Source Code

Experience and effects

MAY 2022 - MAY 2023

Media Scope Group | Advisor

Consulting services regarding product development, design and deployment for international clients (China, South Korea, Estonia, Switzerland) of the Estonian marketing agency

- Determining business requirements and advising on development solutions
- Working with a client from Switzerland, I advised on technical solutions, approaches to software testing and building the right user experience. I also collaborated on an in-depth study of the expectations of a venture capital client from South Korea.

JUNE 2022 - DECEMBER 2022

RestaurantClub | Lead Front-end Developer

E-commerce application for one of the biggest Polish FoodTech companies

- Introduced modern development guidelines and code architecture, delivered technology solutions in React and mentored juniors and interns in the team, helping them grow in the industry.
- I delivered an MVP of the app within the required time enabling business to expand rapidly. The main challenge of the project was how quickly the functionality could be proven, which was done by properly implementing scrum methodologies.

React Next.js GraphQL Styled Components

AUGUST 2020 - APRIL 2021

Vitresoft | Front-end Developer

E-commerce in the Entertainment industry

- Implemented front-end solutions in React and NextJS, including developing modern development guidelines and code architecture of the application.
- As part of the project, I focused on optimising the e-commerce interface, as the site had to be prepared for very large peaks of users. Thanks to proper optimisation, up to tens of thousands of people could use the site at any one time.

React Next.js Redux REST

JULY 2020 - AUGUST 2020

PayTicon | Front-end Developer

E-commerce in the FinTech industry

- Implemented FinTech solution focused on pre-paid cards selling
- Worked in the Scrum Agile methodology with use of JIRA and Git Flow

React Gatsby Amazon Cognito

Non-commercial experience

MAY 2023 - PRESENT GI.ORG.PL

Generacja Innowacja, Founder

- Established Fundacja Generacja Innowacja as a legal entity focused on building socially responsible technology,
- Managing product vision creation and implementation process,
- Handling partner and customer relations
- Developing innovative solutions for the NGO sector,
- Leading a team of people developing social technological solutions,
- Built one of the most popular political awarness platforms in Poland (+2.8M unique users total)

Leadership Management Cooperation

myPolitics

- Created the most popular Polish youth medium in the pandemic and a political education platform,
- Developed IT solutions for the media and AdTech industry,
- Implemented work automation solutions, including full content generation and management,
- Managed product development from A to Z (front-end, back-end, design, algorithms),
- Led a team of developers and journalists, implementing holacracy methodology,
- Designed branding and implemented the majority of the project's tech solutions.

React Next.js Formik UI/UX Product vision Styled Components

Echo Generacji

- Co-founder of a consortium of the most active youth NGOs,
- Designed the project's application design and implemented it as a modern web application,
- Prepared the processes of consortium management, cooperation strategy and managed joining of new organizations.

React Tailwind Vercel UI/UX
